

## Solar Team 5 Application, due by February 23, 2022

You have expressed an interest in being part of **Gallup Solar Team 5**.

If you are one of the ten applicants chosen for this program, you will receive a 200 watt solar system for the essentials of light, charging, and running low wattage AC appliances. A small DC refrigerator is also included.

The system must be installed in an indigenous home without electricity. That can be your home or the home of an indigenous person who can benefit from this very basic system. Preference will be given to persons with medications requiring refrigeration.

You will also receive training to understand, install and maintain the system safely. Completion of the course and make up calls for any missed group sessions is required.

### SCHEDULE

The course consists of six classes by conference call. **Classes are every other Wednesday at 6pm starting March 23 through June 1**. You will be given online links to classes on [gallupsolar.org](http://gallupsolar.org) or, if needed, loaned a tablet for home study. For the bi-weekly call you will need to a good cell signal, landline or internet connection. You will be asked to prepare questions for each class to insure your full understanding.

After the sixth class you will assemble your system in Gallup with the help of Bill Bright following Covid guidelines.

You will be paired with an experienced graduate of another team for the installation. If you are not the recipient, make sure the recipient knows how everything works. Be available for follow up maintenance as needed, it's best if system is located nearby.

A final report with photos and/or video must be submitted when you have completed the installation. You will now be a 'Solar Tech' and you may be able to get solar jobs or even start your own business.

# Solar Team 5 Application, due by February 23, 2022
