

GALLUP SOLAR TEAM 10 APPLICATION

Due by APRIL 1, 2026

If you are one of the ten indigenous applicants chosen for Solar Team 10, you will learn about and have access to an Off Grid Solar System. We will demo and supply two versions: a DC system that will power lights, charge devices and run a low wattage DC refrigerator or a bigger system with an inverter to run AC appliances.

QUALIFICATIONS

The system must be installed at an indigenous home without access to the electric grid. It can be your home or that of another indigenous person.

FINANCIAL AGREEMENT

Systems will be donated in cases of need. Applicants will be interviewed about their ability to pay a part or all of the estimated wholesale cost particularly in the case of the inverter (about \$250). We will demo and supply AC appliances at discount: Instapot, signal booster, ipad, etc. A \$20 stipend is required to pay our solar tech when they visit your site to interview you and also as for any other visit they make.

HANDS-ON CLASSES

All members of Solar Team 10 will be required to attend 8 Hands-on Training Classes. Completion of the course is required. Missed classes must be made up. Classes are every other Wednesday at 6pm May through August 2026 and are held as part of Gallup Solar's regular meetings in person at 113 East Logan Ave., Gallup. Homework will be assigned.

INSTALLATION

All installations will reflect the culture of helping friends and relatives and strengthening the bonds of indigenous survival. If you are giving your system to a non team member you are responsible for explaining it and be available for repairs.

PRESENTATION

A final report with photos must be presented when you have completed the install. We welcome videos, slideshows or powerpoint which can go on our website.

GRADUATION

A certificate of completion is given by Gallup Solar. You may decide to become a Solar Tech Installer, get NABCEP certified or even start your own business.
